

The active ingredient in Wonder Spray is hypochlorous acid (HOCL), the chemical your white blood cells use to kill bacteria, virus, yeast, mold, and fungus. Products using HOCL are on the EPA List of chemicals that meet EPA's criteria for use against SARS-CoV-2, the virus that causes COVID-19. Other products using HOCL have been FDA cleared for wound cleansing, first aid and skincare. HOCL is what our white blood cells use to attack and kill pathogens and it is entirely safe for human tissues.

Wonder Spray with HOCl®—For relief from a variety of ailments
